Rotar RCC Concrete Cutter

Extreme powerful heavy industrial concrete cutter. Despite his enormous power, the Rotar Concrete Cutter has short cycle times. With this unique combination, the RCC is a real game changer!

Replaceable cutting teeth

The RCC is fitted with replaceable cutting teeth. Easy to maintain, easy to replace. An unique feature for these tools. This means less downtime and no welding on the basic construction. The wear-resistant casted cutting teeth offer full protection of the cutting jaws.

Powered by RAMPLIFIER®

The RCC is equipped with two hydraulic cylinders with an integrated RAMPLIFIER®. Once the RCC is facing heavy resistance, the RAMPLIFIER® is activated and doubles the pressure up to 700 bar in a split of a second. This new RAMPLIFIER® technology is a Rotar in-house designed technology.

Construction & hydraulics

The RCC is constructed from high-grade performance steel. The large diameter of hoses, bores, and pipes reduces the back pressure in the hydraulic system and contributes to the extraordinary features of this RCC. The long bearing pivot points support combined loads from all directions.
